

Go Green with the SBA 504 Program

Have Energy Reduction

Reduce your existing energy consumption by at least 15% (non-applicable for startups). If buying or constructing a new facility, it must be 15% less energy consumption than your last location.

OR

Retrofit your existing facility to reduce the energy consumption by 15% (regardless of energy use at other facilities you may operate).

Or Renewable Energy

Upgrade your plant, equipment, and process with a renewable energy source such as the small-scale production of energy for individual buildings or communities' consumption, commonly known as micro power, or renewable fuel producers including biodiesel and ethanol producers.

This goal is met if the upgrades generate at least 15% of the entire buildings energy.

An energy audit, engineering report, or other professional evaluation is required to verify the energy usage at the facility or facilities (measured in actual energy usage, e.g. kilowatt hours, therms, or gallons, as applicable, not in dollar amounts).
